DETAILED ACTION

Allowable Subject Matter

Claims 1, 8-11 and 15-23 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 1, the prior art of record does not teach nor suggest, in the claimed combination, an electromagnetic device used in a case containing oil, the device comprising; an electromagnetic device body including a coil formed with a conductor wound around a bobbin and a cover member enclosing said coil; and a cover molded around said electromagnetic device body with a molding pressure, said cover member protecting said coil from said molding pressure when said cover is molded around said cover member; wherein said bobbin is composed of a material having lubricating characteristics; wherein the conductor is coated with an outer coating and wherein said outer coating comprises; an insulating layer which is made of enamel formed over the conductors and a welding layer which is made of thermoset epoxy formed over the insulation layer.

Claim 18, the prior art of record does not teach nor suggest, in the claimed combination, an electromagnetic device used in a case containing oil, the device comprising; an electromagnetic device body including a coil formed with a conductor wound around a bobbin and a cover member enclosing said coil; and a cover molded around said electromagnetic device body with a molding pressure, wherein said cover member comprises a means for protecting said coil from being directly subjected to molding pressure when said cover is formed by injection molding, by covering said coil;

wherein said bobbin is composed of a material having lubricating characteristics; wherein the conductor is coated with an outer coating and wherein said outer coating comprises; an insulating layer which is made of enamel formed over the conductors and a welding layer which is made of thermoset epoxy formed over the insulation layer.

Claim 19, the prior art of record does not teach nor suggest, in the claimed combination, an electromagnetic device used in a case containing oil, the device comprising; an electromagnetic device body including a coil formed with a conductor wound around a bobbin and a cover member enclosing said coil; and a cover molded around said electromagnetic device body with a molding pressure, said cover member having a material strength sufficient to protect said coil from being directly subjected to said molding pressure when said cover is molded around the cover member; wherein said bobbin is composed of a material having lubricating characteristics; wherein the conductor is coated with an outer coating and wherein said outer coating comprises; an insulating layer which is made of enamel formed over the conductors and a welding layer which is made of thermoset epoxy formed over the insulation layer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
